Are You Buying Connectivity or Business Continuity?

Traditional internet providers offer basic connections that come with risks like downtime, performance issues, and a lack of application prioritization. These challenges disrupt workflows, disappoint customers, and reduce your productivity. BVS CloudPath™ is designed to provide South African enterprises with a trusted foundation for success in the digital age.

The ClouPath Advantage

CloudPath™ is redefining SD-WAN by providing a flexible, high-performance platform that MSPs can brand, scale, and support as their own. We separate the SD-WAN and security planes, giving you the freedom to change security vendors without altering your network fabric.

Core Capabilities

Security-Agnostic

Choose any firewall vendor (pfSense, Fortinet, Cisco) from our marketplace to fit your client's needs.

Intelligent Routing

Prioritize critical traffic with application-aware routing and sub-second failover.

Carrier Independent

Ensure optimal performance anywhere using Fiber, 4G/5G, Satellite, or Starlink.

Global Reach

Access over 52 international PoPs for low-latency connectivity at any remote site.

Your Management Command Center

CloudPath™: A multi-tenant portal for total SD-WAN ecosystem control.

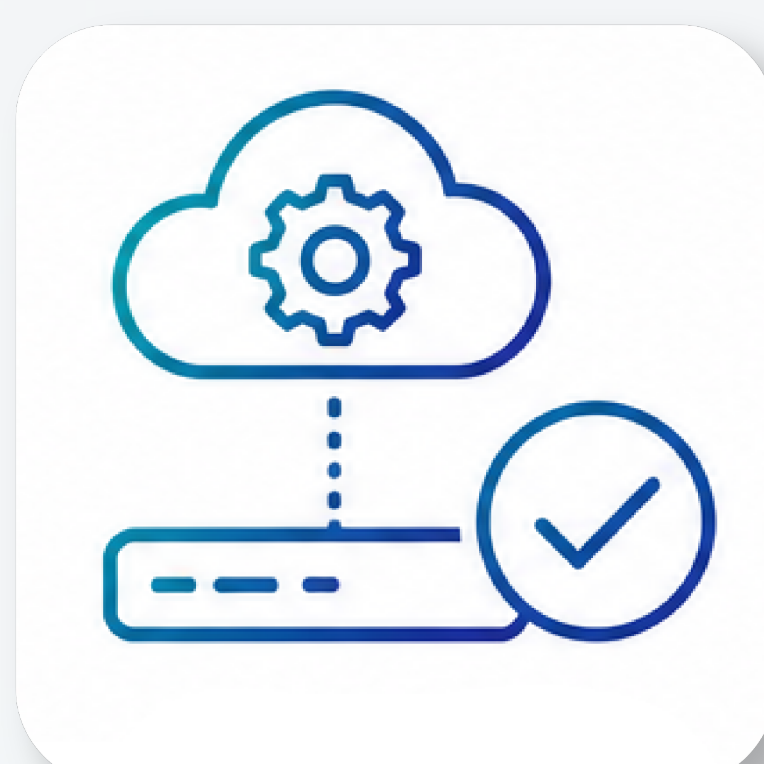

Single Pane of Glass

Provision, monitor, and support hundreds of customers from one interface.

Full Visibility

Rapidly deploy devices using automated MAC-address configuration.

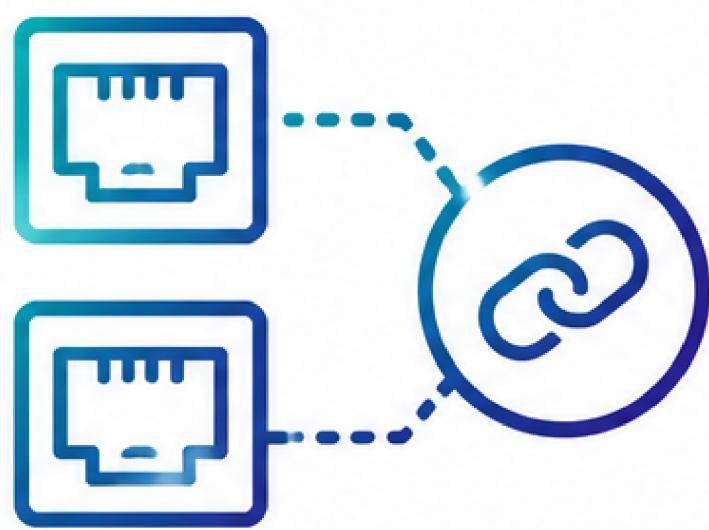

Zero-Touch Provisioning

Use Layer 7 DPI for real-time insights into bandwidth usage and security threats.

Advanced Features for Smart Resilience

Our solution ensures your network operates at peak efficiency through robust optimization techniques.

Link Aggregation (Bonding)

Combine multiple internet connections to increase total bandwidth and redundancy.

Instant Failover

Automatically switch to backup links during primary failure while maintaining the same Static IP.

Bidirectional QoS

Handle prioritized traffic automatically in both directions without complex manual configurations

Unmatched Security Control

Dynamic Threat Mitigation

Built-in firewall and SASE (Secure Access Service Edge) frameworks detect and block threats in real time.

Data Protection

Secure all data in transit using industry-standard AES 128/256 encryption and HMAC authentication.

SecureConnect

An industry-first feature allowing remote access to manage and troubleshoot devices both upstream (modems) and downstream (printers, cameras) of the SD-WAN node.
